Course Outline : BI 2070 Molecular Genetics and Heredity Fall 2001

BI 2070 Molecular Genetics and Heredity 3(3-0-3)

Biology 2070 is a course dealing with both classical and molecular genetics. The chromosomal and molecular basis for the transmission and function of genes will be covered as well as the construction of genetic and physical maps of genes and genomes. Molecular biology strategies for isolation of specific genes and examples of regulatory mechanisms for the expression of the genetic material in both prokaryotes and eukaryotes will also be discussed.
